ONLINE QUIZ WEB APPLICATION

Submitted in partial fulfilment for the award of the degree of

B. TECH in

Computer Science & Engineering

by

V Siddharth Raju 20BCE2501

V S K Ashish 20BCE2464

Under the Guidance of

Prof. Rajkumar R

VIT®
Vellore Institute of Technology
(Deemed to be University under section 3 of UGC Act, 1956)

1. Introduction

1.1 Background

With the advancements in technology in recent years there has been considerable increase in the demand of online portals, websites and applicationsas people are now switching to the online mode of recording and storing data replacing the traditional manual way. Similarly, there is a need of a reliable, stable and efficient examination or quiz system enabling the conduction of testsor quizzes in the online mode.

Also, in recent years, the use of electronic online quiz systems has become quitepopular due to the pressures of increasing class sizes, and the need for more efficient methods of assessing distances students. It is very essential for an Institute to handle examinations and their results. It is very useful for an Institute to test its students continuously for their mutual development. This alsomotivated us to work with web-based quiz system to create a web based efficient quiz system.

Online Quiz Web Application refers to will be useful for students and teachers in schools, colleges or universities. It will replace the paperwork and overcomethe outcomes of traditional way of examinations using paper or pen. It is a web-based platform that can be used by Admin at any remote location. It is cost effective and time effective. The candidate can login through proposed computer with their valid credentials, then they can take the quiz while the teacher or admin can set the quiz and view students' results.

1.2 Objective of the project

The objective of this project is to develop an efficient, attractive and reliable online quiz web application enabling teachers or administrators to create and set quiz and students to attend quiz. That is providing an online comprehensive solution to manage quizzes. The purpose of the project is to create a web application, that can be used to test the knowledge of the students replacing the manual procedure used for conducting exam as that is not only a time- consuming process but also error prone due to human limitations.

1.3 Organization of Report

The report consists of the following major components:

- Introduction: This section includes the overall view of the project, the background and the objective.

- Overview and Planning: In this section the project requirements and analysis is being done, proposing the idea of the system, analysis of requirements and tools that may be needed and the project timeline or Gantt chart.

- System Implementation: This section contains the full implementation part of the project containing implementation of all the components built in this project

- Results and Discussion: Here we discuss about the project outcome and work on improvements and refining of the project.

- Conclusion and References: We finally come to a conclusion for the entire project work and mention the references and all external sources of help.

2. Overview and Planning

2.1 Proposed System Overview

The entire system is divided into following main parts:

- Welcome Page: This contains an intro text, navigation menu, brief about the website, a feedback form and contact section.

- User Signup and Login: This contained the signup and login forms with complete form validation to validate and authenticate user types.

- Dashboard: After successful login users are directed to a dashboard. Based on the project's requirement we have created two kinds of dashboard for the two user types administrator and student each equipped with all required functionalities.

- Quiz: Through the dashboard the students can select and then appear for the quiz which is created by the admin. The quiz contains a timer and in the end the marks obtained are displayed which are also reflected in the dashboard.

2.2 Tools Used

Frontend: HTML, CSS, JavaScript Backend: PHP

Database: MySQL

2.3 Hardware Requirements

The software application we have designed connects the users with the quiz over the internet. So, all the hardware that we require to connect to the internet will be the hardware required for the system. Hence, we require devices like a modem, WAN – LAN, Ethernet Cross-Cable. Such devices will be required at

both the student's end and the administrator's end. The internet connectivity devices at the server needs to be powerful enough to handle all the students who are trying to access the system. The connection also has to be safe and reliable so that the users can safely navigate through and perform their respective tasks.

2.4 Software Requirements

Requirement	Type
Operating System	Windows 7 or higher versions
Database	MySQL
IDE	Visual Code, XAMPP
Browser	Google Chrome, Firefox, Microsoft Edge

3. System Implementation

3.1 Code and/or Architecture Development

PHP

Feedback

5. Conclusion

This project on Online Quiz Web Application (Quiz Hub) has been developed in order to computerize the entire process of giving quizzes. This project takes care of all the requirements of someone who is interested in taking or distributing quizzes.

This entire project has been an incredible learning experience for the entire team. During the development of this project we were able to learn various php, JavaScript and CSS concepts that would not have been possible otherwise.As a team we intend to continue working on this project even after this course has ended.
